Unprotect worksheet excel 2013

I'm not robot!

Spreadsheets and Microsoft Excel in particular are great tools for any kind of numerical analysis, but they're good for handling and storing other data as well. I seem to recall a survey a few years ago that Excel was the #1 database in the world with Access, Oracle and SQL Server lagging very far behind. Of course, it all depends on your definition of a database but the point is made. Excel has useful features for developing forms and hiding information so that it's easy to create mini apps which take user entered information, combine with data stored in the spreadsheet and provide an answer. Some of the spreadsheets are very sophisticated and Excel offers a "protect" feature that locks down a sheet (or workbooks) and prevents unwanted meddling or fiddling with the data. The protect feature even lets the owner set a password so that the more determined meddler can be thwarted and confidential data kept confidential. Except it doesn't. Any protected Excel spreadsheet can be unprotected in three steps. Here's how. With the Excel spreadsheet open, Press Alt + F11 (or go to View Code in the Developer's Tab) In the window that appears, paste in this code (courtesy of University of Wisconsin-Green Bay) Sub PasswordBreaker()   'Breaks worksheet password protection.   Dim i As Integer, j As Integer, k As Integer   Dim l As Integer, m As Integer, n As Integer   Dim i1 As Integer, i2 As Integer, i3 As Integer   Dim i4 As Integer, i5 As Integer, i6 As Integer   On Error Resume Next   For i = 65 To 66: For j = 65 To 66: For k = 65 To 66   For l = 65 To 66: For m = 65 To 66: For i1 = 65 To 66: For i2 = 65 To 66: For i3 = 65 To 66: For i4 = 65 To 66   For i5 = 65 To 66: For i6 = 65 To 66: For n = 32 To 126   ActiveSheet.Unprotect Chr(i) & Chr(j) & Chr(k) & _   Chr(l) & Chr(m) & Chr(i1) & Chr(i2) & Chr(i3) & _   Chr(i4) & Chr(i5) & Chr(i6) & Chr(n)   If ActiveSheet.ProtectContents = False Then   MsgBox "One usable password is " & Chr(i) & Chr(j) & _   Chr(k) & Chr(l) & Chr(m) & Chr(i1) & Chr(i2) & _   Chr(i3) & Chr(i4) & Chr(i5) & Chr(i6) & Chr(n)   Exit Sub   End If   Next: Next: Next: Next: Next: Next   Next: Next: Next: Next: Next: Next End Sub Press F5 (or click Run) and wait a minute or so.....hey presto, spreadsheet unprotected. On my modest PC it takes about 80 seconds to crack the password and it seems to come up with a password such as AABBAAABBB^ which isn't the original password but nevertheless works. Spreadsheet is now unprotected. Try it for yourself. Shocked? Surprised? Worried about a .xls that you sent last week with confidential data in it? I'm sure lots of people would be very worried if they knew how easy it was to unprotect a sheet. To be fair to Microsoft, the help page says, "IMPORTANT Worksheet and workbook element protection should not be confused with workbook-level password security. Element protection cannot protect a workbook from users who have malicious intent. For optimal security, you should help protect your whole workbook file by using a password." Personally, I think setting a password sets unrealistic expectations about the level of protection; in some ways it would be better if there was no password option as there would be no expectation. Overall, it's best to think of protecting an Excel spreadsheet as a way of making the spreadsheet more convenient to use and don't ever think of protecting an Excel spreadsheet as a way to hide secret information. But what if you don't forgot the current password for Excel Workbook 2013? What can you do if you want to unprotect workbook Excel 2013 without password. Don't fret, this article would introduce effective methods to unprotect Excel 2013 with or without a password. You can check the following table of content and select the part you need. Horribly, if your Excel password has been lost and forgotten, you can always trust PassFab for Excel. It is a talented application to recover lost Excel password and unlock Excel file in a safe manner. It's worth a try because PassFab for Excel will never make any changes in Excel file records while extracting the password. Here, if are still confused about PassFab for Excel, you can go to the official website to learn more about it. Now, check the steps over how to reocver the Excel workbook 2013 password, and then you can unprotect Excel workbook 2013. As you know the password of Excel 2013 workbook, the things are gonna get easier for you. Check the following steps. Way 1 Open an Excel 2013 workbook. Click on "Review". On "Changes", click on "Protect Workbook" On the pop-up windows, enter your current password. Way 2 Open an Excel 2013 workbook. Click on "File" tab. In "Info", click on "Protect Workbook" Click on "Encrypt with Password". Delete the password. To be fair to Microsoft, the help page says, Excel spreadsheet 2013, VBA code is another method you can attempt to use. You'll know how to do that by following the below steps. Open the Excel file, and press Alt + F11 to open VBA window. Click on Insert, select Module. On the General window, enter the VBA code. Click on "Run" button (or press F5 key) to run it. In a second, a small box pops up, in spite of the password, just click on OK to close it. Close the VBA window, you will find your Excel sheet has been unprotected without the password. The truth is that the Excel 2013 worksheet password can be easily removed if you forgot it. Let's view another feature of PassFab for Excel. That is "Remove Excel Restriction Password". It can create a new Excel file of the same content from the password-protected Excel worksheet 2013. Download and install PassFab for Excel. Free Download Free Download Choose "Remove Excel Restriction Password" option. Import the Excel file which you want to unprotect. Click "Remove" button, your Excel workbook password will be removed within second. How to Unprotect Worksheet Excel 2013 Free Download Free Download In summary, do you find the useful way to unprotect Microsoft Office Excel 2013 password? Hope you've read the information in details and you've gotten your best way to unprotect an Excel workbook 2013 and unprotect sheet Excel 2013 for changing or opening. 1 Open the workbook with a protected sheet in Microsoft Excel. You can usually do this by double-clicking the file's name on your computer. 2 Right-click the tab for the protected sheet. Each sheet's tab appears along the bottom of Excel. The protected sheet often has a padlock icon in some versions of Excel. Right-click the tab (or the lock icon) to open the context menu.[1] If multiple sheets are protected, you'll need to remove protection on each sheet separately. 3 Click Unprotect Sheet. If the tab doesn't have this option, this sheet isn't protected. 4 Enter the password and click OK. If the password isn't correct, the sheet will become unprotected. If you don't know the password, see the Using Google Sheets method. This method lets you upload the file to Google Sheets, which removes all protections added in Excel. If you're using Excel 2010 or earlier and prefer not to upload to Google Sheets, see the Using VBA Code in Excel 2010 and Earlier method. Advertisement 1 Go to in a web browser. If you have a Google account, you can use Google Sheets (a free online app that's similar to Excel) to remove protection from all sheets in a workbook—even if you don't know the password. If you're not already signed into your Google account, follow the on-screen instructions to sign in now. If you don't have a Google account, see How to Make a Google Account. 2 Click + New. It's at the top-left corner of the page. 3 Click File Upload. This opens your computer's Open panel. 4 Select the Excel file you want to edit and click Open. This uploads the file to your Google Drive. 5 Double-click the Excel file in your Google Drive. You'll probably have to scroll down to find it. This opens a preview of the file. 6 Click the Open with menu. It's at the top of the preview. A menu will expand. 7 Click Google Sheets. Now that the file is open for editing in Google Sheets, any sheet protections added in Excel have been removed. 8 Re-download the file to your computer. If you want to keep working on the file in Microsoft Excel rather than Google Sheets, you can download this newly-unprotected version of your workbook using the following steps: Click the File menu at the top-left corner of your sheet. Click Download As. Click Microsoft Excel (.xlsx) . Select a folder to save the file. If you want to keep the original version of the file (the one with a protected sheet) intact, type a new name for the file as well. Click Save to download the file. Advertisement 1 Search "password find online" and find an online password removal service. 2 Click "Unprotect your file". 3 Click "Browse" and choose the protected file. 4 Choose "Remove password" radio button. 5 Wait while the service removes your password. 6 Download the unprotected file, if your file is small. 7 Download a demo-file if your file is big. To get the whole file, you'll need to enter a license key. Advertisement 1 Open the workbook that has a protected sheet in Excel. You can usually do this by double-clicking the file's name on your computer. Excel files usually end with the file extension .xls or .xlsx. Use this method if you have already tried unlocking a sheet but found that it's password-protected (and you don't know the password). This method will not work in Excel 2013 or later. 2 Re-save the file in the xls format. If the file you're working on has the ".xlsx" extension (common if it was created or edited in newer versions of Excel), you'll only be able to use this method if you first convert it to the Excel 97-2003 (.xls) format. Here's how to do this:[2] Click the File menu at the top-right corner. Click Save As. Go to the folder in which you want to save the file. Select Excel 97-2003 (.xls) from the "Save as type" or "File Format" menu. Click Save. Follow the on-screen prompts to make any necessary conversions. 3 Press Alt+F11 to open the Visual Basic Editor. 4 Right-click the workbook's file name in the "Project - VBAProject" panel. It's at the top of the left panel. Make sure you right-click the option that contains the file's name (ends with ".xls"), which should be at the top. A menu will expand.[3] 5 Click Insert on the menu. Another menu will expand. 6 Click Module. This inserts a new module in which you'll paste some code. 7 Copy the code. Highlight the code that follows this text, then press Ctrl+C (PC) or ⌘ Command+C to copy it: Sub PasswordBreaker() 'Breaks worksheet password protection. Dim i As Integer, j As Integer, k As Integer Dim l As Integer, m As Integer, n As Integer Dim i1 As Integer, i2 As Integer, i3 As Integer Dim i4 As Integer, i5 As Integer, i6 As Integer On Error Resume Next For i = 65 To 66: For j = 65 To 66: For k = 65 To 66 For l = 65 To 66: For m = 65 To 66: For i1 = 65 To 66 For i2 = 65 To 66: For i3 = 65 To 66: For i4 = 65 To 66: For i5 = 65 To 66: For i6 = 65 To 66: For n = 32 To 126 ActiveSheet.Unprotect Chr(i) & Chr(j) & Chr(k) & _ Chr(l) & Chr(m) & Chr(i1) & Chr(i2) & Chr(i3) & _ Chr(i4) & Chr(i5) & Chr(i6) & Chr(n) If ActiveSheet.ProtectContents = False Then MsgBox "Password is " & Chr(i) & Chr(j) & _ Chr(l) & Chr(m) & Chr(i1) & Chr(i2) & _ Chr(i3) & Chr(i4) & Chr(i5) & Chr(i6) Exit Sub End If Next: Next: Next: Next: Next: Next Next: Next: Next: Next: Next: Next End Sub 8 Right-click the new module and select Paste. The copied code now appears in the module window. 9 Press F5 to run the code. Excel will now run the code, which can take several minutes. Once the code is finished running, a new password will appear on a pop-up window. The new password will be a random number of "As" rather than the original password. 10 Click OK on the Password pop-up. A new password will appear but you won't need to write it down. Clicking OK will remove sheet protection automatically.[4] If you had to convert the file to an earlier format, you can now save the workbook again as an .xlsx file. Advertisement Add New Question Question What if I forgot the password to the document? Try to use method 2 above (Uploading to Google Sheets). The downloaded Excel sheet from Google Sheets will be unprotected, so no password is needed. Question The Google sheet method is not working. It won't work for a password to open the document, but it works fine for passwords restricting shared access. If you can open your file, but can't edit it, this method will work. If you can't open you file without entering password, it won't work. In such case you will need to use password cracking tools like Password-find, Rixler password cracker, Password recovery lastic to remove protection from your file. It's impossible to restore or bypass a password to open the document without special software. Question I received Compile error Syntax error. You need to delete the phrase Breaks worksheet password protection. Compiler don't understand it and there you have the compile error cause of the syntax error. If VBA code is not your thing, you can use password removal apps like Password-find or Password Lastic to remove the password from your sheet.
